Short title:	Bill C-206: Extension of the exemption for qualifying farming fuel to marketable natural gas and propane													
Description:	<p>This bill amends the <i>Greenhouse Gas Pollution Pricing Act</i> to extend the exemption for qualifying farming fuel to marketable natural gas and propane.¹</p> <p>The exemption will cover marketable natural gas and propane used for all farm operations. Currently, carbon charge exemptions for these fuels apply only to greenhouse operations.² The exemption applies only to provinces and territories that are subject to federal carbon pricing because they do not have climate pricing plans that meet federal standards.</p> <p>Fuel used for farming activities, but not personal use, is eligible for the exemption.</p>

² Canada Revenue Agency (2019). Fuel Charge Exemption Certificate for Greenhouse Operators. Retrieved from <https://www.canada.ca/content/dam/cra-arc/formspubs/pbg/l404/l404-12-19e.pdf>

³ EF2020 considered the COVID-19 pandemic impact on the sectoral energy demand and assumed that the effect will slowly dissipate over the next two to three years.

the irrigation of field crops, while diesel and motor gasoline are specifically used for machinery, motor vehicles, and personal use of trucks and vans. These assumptions are based on the descriptive analysis of the On-farm energy use in Canada provided by Natural Resources Canada.

Based on these assumptions, the total projected natural gas and propane used by farmers are categorized as eligible fuels for carbon pricing exemption since a very small portion of these fuels were assigned for personal use.

The biggest portion of the carbon charges for natural gas and propane used in greenhouse operations were already exempted under the Act and were subtracted from PBO's projections for total fuel eligible for the new exemption.⁴

The energy used by greenhouse operators was projected by multiplying the share of the greenhouse fuel expenses in the total heating and curing fuel expense by the projected natural gas and propane use in the agricultural sector.

The historical greenhouse fuel and the total farm heating and curing fuel expenses by province are provided by Statistics Canada.

Source of Uncertainty:

Uncertainty is inherent in the shares of the natural gas and propane uses in the agricultural sector relative to the uses in the industrial sector.

Prepared by:

Nasreddine Ammar

⁴ A greenhouse operator is eligible to obtain relief of 80% of the fuel charge when it receives propane or marketable natural gas and an exemption certificate applies.

Cost of proposed measure

\$ millions	2020-2021	2021-2022	2022-2023	2023-2024	2024-2025
Total cost	9	47	59	60	60

Notes:

Estimates are presented on an accruals basis as would appear in the budget and public accounts.

Positive numbers subtract from the budgetary balance, negative numbers contribute to the budget balance.

"-" = PBO does not expect a financial cost
